PLANT PROTECTION *

Exhibit "E"

Planned Project Description

The project will progress in several phases:

1. Services will be provided to the proposed Air Liquide air separation and synthesis gas plant, including a new 138 KV transformer and associated work, underground cables, steam piping, water piping, and wastewater piping.
2. Piping will be constructed to connect the proposed Air Liquide facility's production of nitrogen, oxygen and synthesis gas to Eastman's piping networks and consuming facilities.
3. Downstream production facilities which consume oxygen and synthesis gas will be expanded in several phases to produce more propionaldehyde and butyraldehyde from the expanded synthesis gas capacity. This work is comprised of modifications of reactors and distillation columns to gain the capacity needed.

Exhibit "F"

Planned Water and Sewer Treatment and Effluent Disposal

Wastewater from both the proposed Air Liquide facilities and the expanded Eastman facilities will be treated in the existing Eastman on-site wastewater treatment plant. Discharge will be to the Sabine River through TCEQ-permitted outfalls. Sludge from the treatment plant is incinerated on site. Flammable waste is incinerated in a RCRA-permitted hazardous waste incinerator on-site. All solid waste is landfilled on-site in either a sanitary waste landfill or a RCRA-permitted hazardous waste landfill.

Exhibit "H"

Planned Use of Harrison County Vendors

Eastman has an established program to favor and use local vendors. Electric motors, consumable items, etc are sourced locally. Local contractors are used where appropriate, such as plumbers, HVAC, etc. Some vendor/contractors are located in Harrison County.
